

# Appendix I3

## Consultation Record

---

Summary	Date
Email request sent to Buckinghamshire Historic Environment Records for HER data search for 1km radius	24 <sup>th</sup> April 2024
The Principal Planning Officer for Majors North & Central Team at Buckinghamshire Council provided a response to the pre-application enquiry (24/02556/SO). They suggested that the proposal has the potential to result in significant impacts in relation to heritage and that a Roman Road Alignment crosses the Site, which is both an archaeological notification area and a non-designated heritage asset, and that an archaeological evaluation was required to assess the significance of the site and understand the impact of the development proposal.	9 <sup>th</sup> August 2024
The Senior Archaeology Officer for Buckinghamshire Council provided a letter to Buckinghamshire Council Planning Services (CBC17485). This welcomed the inclusion of archaeology within the scope of the EIA and that a geophysical survey had been instructed but that the original desk-based assessment was not available on-line, and it would be useful if it was supplied.	22 <sup>nd</sup> October 2024
The Senior Archaeology Officer for Buckinghamshire Council was emailed the desk-based assessment and ES figures.	25 <sup>th</sup> October 2024
The Senior Archaeology Officer for Buckinghamshire Council was provided with a written scheme of investigation (WSI) for the geophysical survey by email. They asked that WSI should include the provision of a paper copy as well as a pdf report, GeoTIFF files of geophysical survey data and interpretation shapefiles should be supplied to Buckinghamshire Historic Environment Record (HER). The WSI was approved on the 19th November 2024 and the geophysical survey was conducted between 13th-16th January 2025.	18 <sup>th</sup> November 2024
The Senior Archaeology Officer was consulted on the level of archaeological trial trenching that would be required, who indicated that a minimum of a 4% sample for proposed hard infrastructure and 2% sample for proposed soft landscaping, while a 10% contingency was expected. These requirements and the results of the geophysical survey were used to inform the WSI for archaeological trial trenching provided to the Senior Archaeology Officer for Buckinghamshire and approved.	13 <sup>th</sup> February 2025
The Senior archaeologist for Buckinghamshire attended the trial trenching site visit and was happy with the quality of work. Initial discussion confirmed that there was no evidence for the Roman Road, but that there may be a requirement for targeted investigation of the Romano-British ladder settlement in advance of construction.	3 <sup>rd</sup> April 2025
