

You're invited to a public exhibition

We are developing plans for a new Greener Grid Park on land to the north of Hartmoor Substation on the A179. This project will help support the decarbonisation of Britain's electricity grid.

We want to get the views of local people to inform our proposals, ensuring that the plans reflect community aspirations wherever possible. There are several ways to get involved and find out more:

 Proposed site location.

Visit the public exhibition:

Thursday 11 August 2022,
4.00pm – 7.30pm

Hart Village Hall

What is a Greener Grid Park?

A Greener Grid Park will help increase the amount of renewable energy that can be delivered onto the electricity grid network. It isn't a wind or solar farm, but some buildings that you might associate with storage units or shipping containers. Our plans would provide the same stability as a fossil fuel plant, but in a clean, green way.
