

# Little South Solar Farm

## Biodiversity and Landscape Enhancements

Little South Solar Farm would generate up to 49.9MW of power from solar panels, providing enough clean, green energy to meet the equivalent electricity needs of 15,000\* homes.

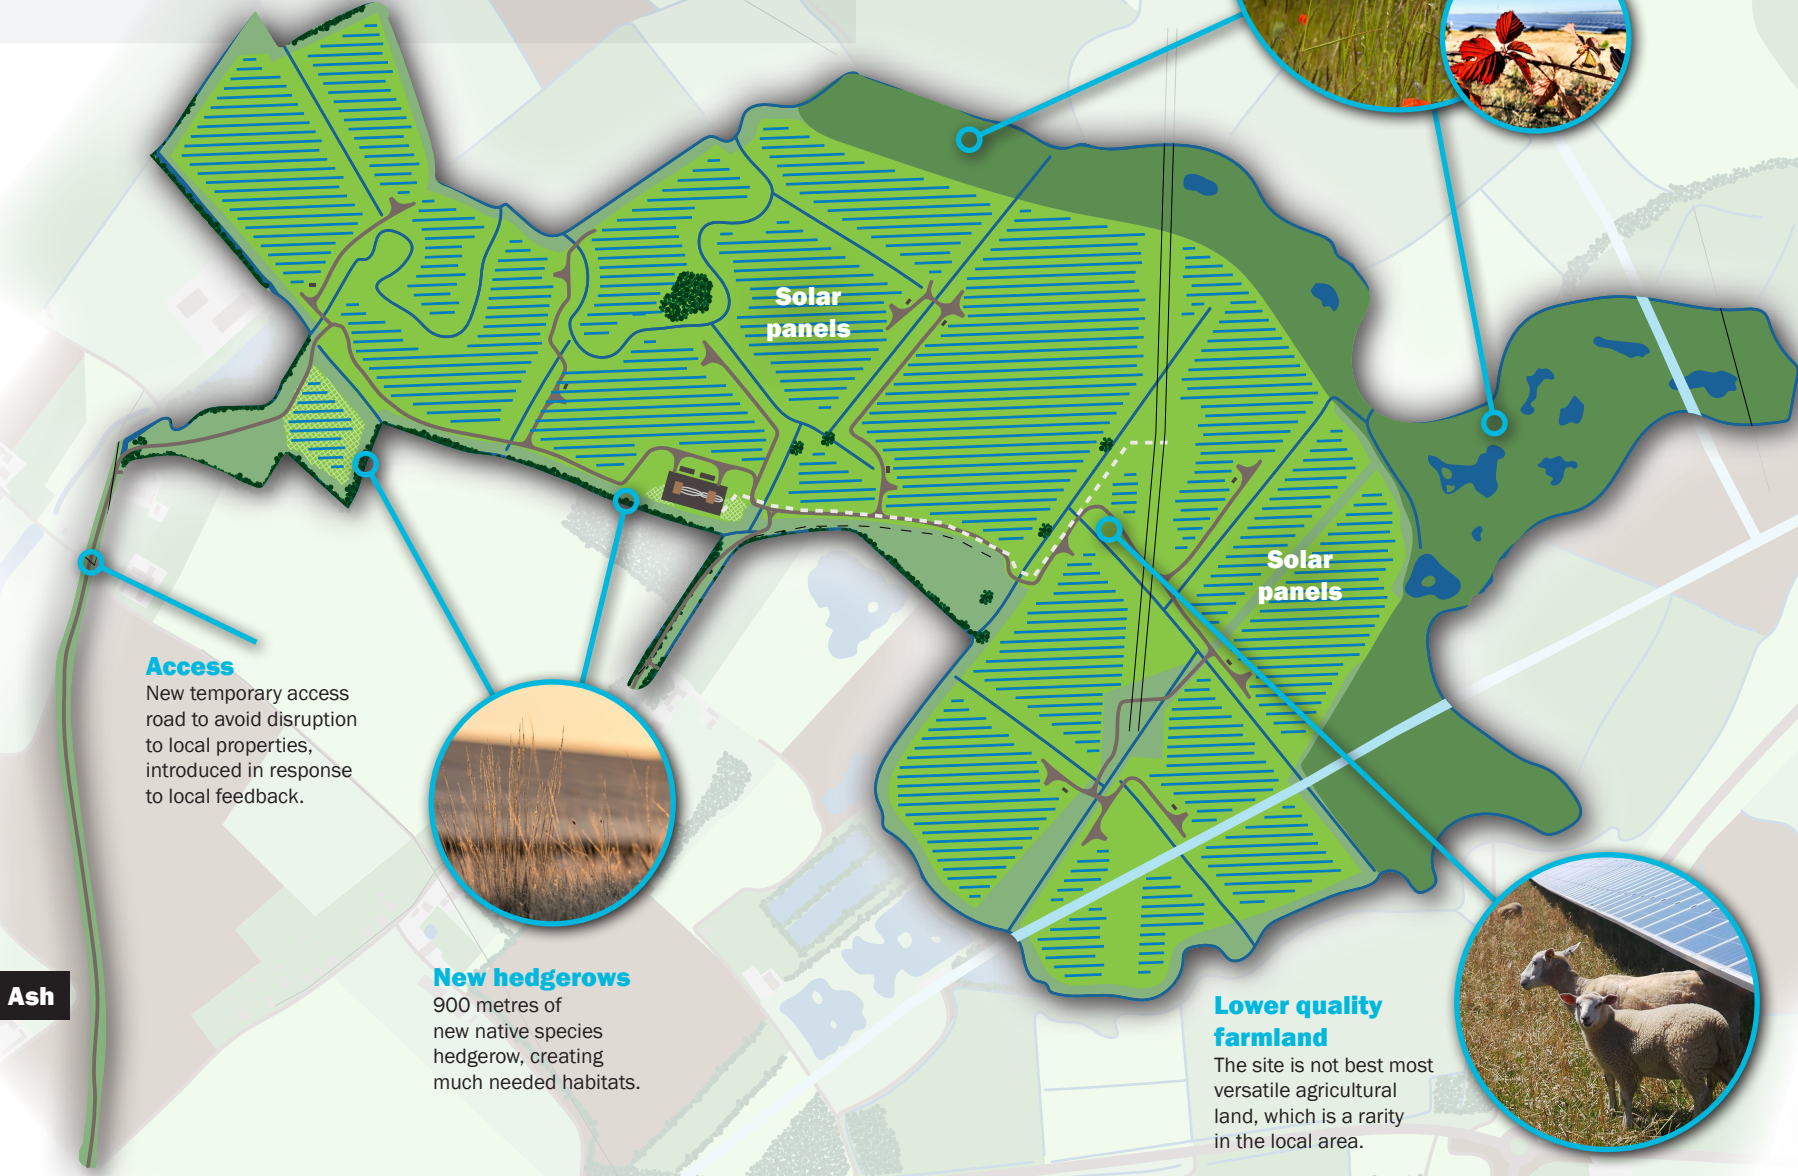

\*Figures above based on planning submission.

### Nature Restoration Area

Includes Coastal Grazing Marsh habitats, creating dedicated spaces for waterfowl, and vital corridors for species such as bats, birds and bees.

### Respecting our heritage

Landscape buffer to Roman Fort, with almost 600m between the amphitheatre and the nearest panel.

### Access

New temporary access road to avoid disruption to local properties, introduced in response to local feedback.

### New hedgerows

900 metres of new native species hedgerow, creating much needed habitats.

### Lower quality farmland

The site is not best most versatile agricultural land, which is a rarity in the local area.
