

- KEY**
- Site Boundary
 - Turbine Locations
 - Infrastructure Layout
 - Proposed Borrow Pit Search Area
 - Existing Track
 - Floating Track
- SNH Peat and Carbon Rich Soil**
- CLASS 1: Nationally important carbon-rich soils, deep peat and priority peatland habitat. Areas likely to be of high conservation value.
 - CLASS 2: Nationally important carbon-rich soils, deep peat and priority peatland habitat. Areas of potentially high conservation value and restoration potential.
 - CLASS 3: Dominant vegetation cover is not priority peatland habitat but is associated with wet and acidic type. Occasional peatland habitats can be found. Most soils are carbon-rich soils with some areas of deep peat.
 - CLASS 4: Area unlikely to be associated with peatland habitats or wet and acidic type. Area unlikely to include carbon-rich soils.
 - CLASS 5: Soil information takes precedence over vegetation data. No peatland habitat recorded. May also include areas of bare soil. Soils are carbon-rich and deep peat.
 - Mineral Soil.
 - Non Soil.
