

# West Andershaw Wind Farm

[www.westandershaw.co.uk](http://www.westandershaw.co.uk)

---

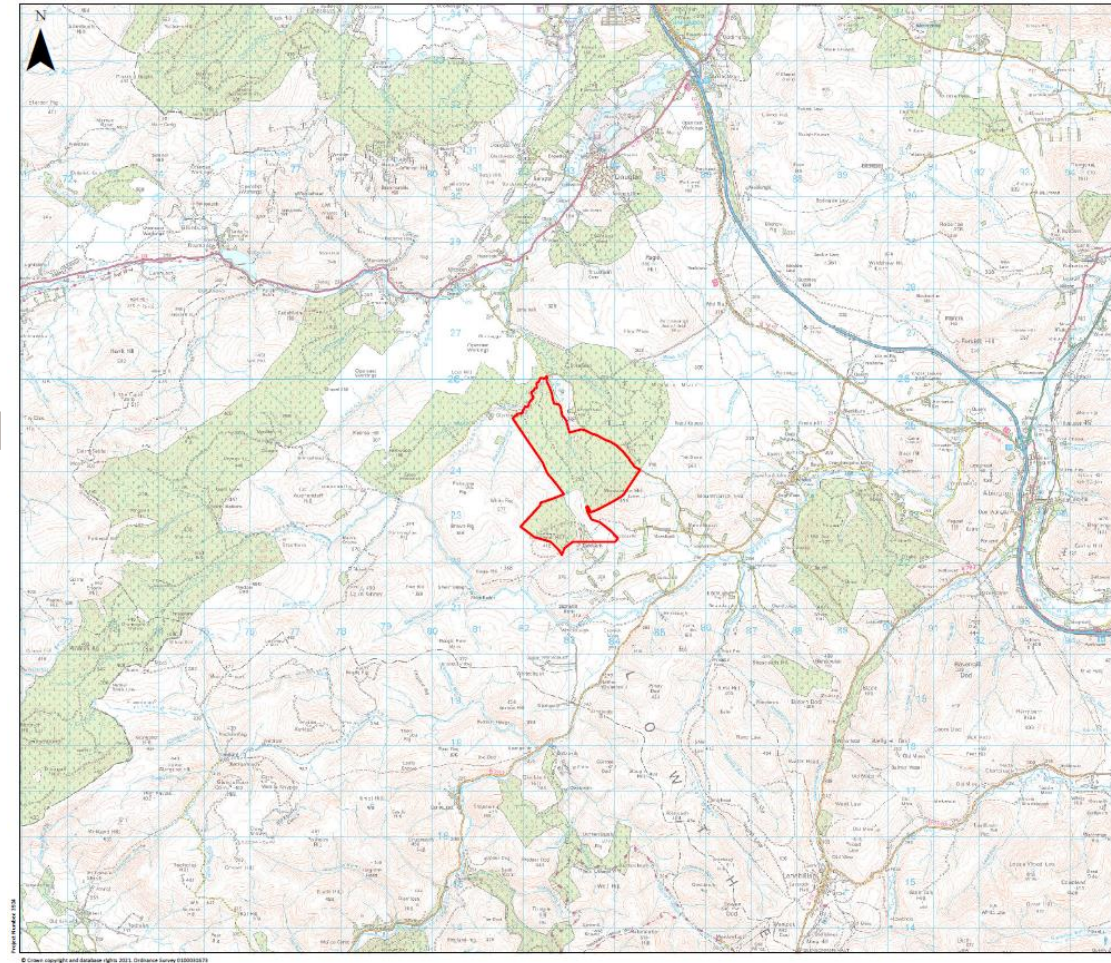

MAY 2021

# About the Site

## Site Location & Potential

- Project at Scoping stage. Scoping live 26 May 21.
- The proposal is being considered as an extension to our existing operational Andershaw Wind Farm and designed accordingly.
- Proposing a maximum of 11 wind turbines.
- Considering turbines up to 250m tip height.
- The installed capacity of the site will be >50MW.
- The existing site, operational since 2017, consists of 11 turbines, 140m tip height, with an installed capacity of 36.3MW.

# About the Site

## Site Location & Potential

- The project team are continuing to refine the design of the windfarm based on the findings of ongoing baseline studies.
- The initial scoping layout for 11 turbines is shown on the right.
- Final turbine numbers, tip heights and locations are still to be fixed.
- The layout will be finalised following completion of studies and community consultation feedback.

# Next Steps

- Ongoing studies to learn more about the site.
- First online exhibition & interactive consultation will take place in August 2021.
- Second exhibition & consultation c. Q4 2021.
- As with the operational site, if consented a community benefit fund will be available for this project. The West Andershaw fund commitment is £5k per MW of Installed Capacity annually.
- The existing operational site has contributed nearly £500k to the local area to date in community benefit, with over 50% of the funds allocated to projects.
- If consented and there is community interest, we will explore a community investment opportunity.
- We continue to follow Scottish Government advice in relation to Covid-19.
